

## Short Course Training Programme 2022

*Online via Microsoft Teams*

Course Title	Date/time	Lead
Systematic Review overview/introduction	2 <sup>nd</sup> February 1.30 – 3.30pm	Dr Ffion Curtis
Implementation Science / Research Frameworks	9 <sup>th</sup> February 10am - 12	Prof Stephen Timmons
Critical Appraisal Skills	22 <sup>nd</sup> February 10am - 12	Dr Kathryn Hinsliff-Smith
Implementing Change-practical know how	9 <sup>th</sup> March 10am - 12	Dr Emma Rowley
Qualitative Interviews & Focus Groups	14 <sup>th</sup> March 10am - 12	Dr Charlotte Overton & Dr Liz Sutton
Systematic Review - Workshop 1	16 <sup>th</sup> March 10am - 12	Dr Ffion Curtis
Systematic Review - Workshop 2	4 <sup>th</sup> May 10am - 12	Dr Ffion Curtis

**For more information and how to register please see next page.**

Please note the Systematic Review workshops are fully booked, however, you are welcome to register your interest in a possible repeat of the course.

- **Systematic Review – overview/introduction workshop, 2<sup>nd</sup> February.**  
The aim of this workshop is to provide a comprehensive overview of the purpose and methodology for conducting systematic reviews of quantitative and qualitative evidence.
- **Implementation Science/Research Frameworks, 9<sup>th</sup> February.**  
This short course will introduce why implementation of new (evidence-based) treatments or programmes is problematic in health care. We will then look at the emerging discipline of implementation science which seeks to understand why these problems occur and what can be done about them.
- **Critical Appraisal Skills - Lots of evidence but how do we critique?, 22<sup>nd</sup> February.**  
This session will move through the different stages of collecting evidence and then deciding what's relevant as well as what tools we can use to help us. The session will be solely based on healthcare evidence and will briefly consider the grey literature as well as the accepted academic sources. We will also talk about predatory journals and pre-print materials which is a growing area.
- **Implementing Change – practical know how, 9<sup>th</sup> March.**  
In this session, we'll discuss some of the operational aspects of implementation, such as identifying your audience, developing a strong value proposition, and actually knowing what 'thing' is resulting from your work. Informed by implementation science, but probably more akin to product development and marketing, the session will make most sense for individuals / teams who have something (in development or finished) that is implementation ready.
- **Qualitative Interviews and Focus Groups, 14<sup>th</sup> March.**  
Drawing on academic approaches and personal experience, this session will provide an overview of how to conduct qualitative interviews and focus groups in Health Service Research. It will provide an introduction to the ways in which interviews and focus groups are used in qualitative health research and offer some insights for good practice.
- **Systematic Review Workshop 1, 16<sup>th</sup> March.**  
Discussion of the resources required to conduct a systematic review, development of a systematic review protocol (including getting it registered/published), search strategies and comprehensive literature searching.
- **Systematic Review Workshop 2, 4<sup>th</sup> May.**  
Discussion on data extraction tools, understanding the role of critical appraisal and risk of bias, synthesising the evidence and effective communication of findings for different target audiences.
